The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.02	0.01	2.00	0.04
Gender of the head of household (Male = 1, Female = 0)	-0.15	0.05	-3.00	0.00
Constant	1.50	0.10	15.00	0.00

The results indicate that the age of the head of household has a positive and significant effect on the number of children in the household, while the gender of the head of household has a negative and significant effect.
